Systems developer with a path through infrastructure and software architecture.

On-site with clients today, open to remote work, exclusivity or extra hours by agreement.

Objective

Work as a Systems / Backend Developer focused on corporate solutions, complex integrations and software architecture, contributing to stability, scalability and evolution of critical systems, with a path toward technical leadership.

Summary

Technology professional with a solid path through infrastructure, technical support and systems development. Seven years as an IT technician and consultant, working with hardware, networks, servers and mid-size corporate infrastructure. Since 2021, working as a developer in a software house (contractor), delivering projects for three companies in the same group across multiple business domains. Hands-on experience evolving corporate systems, complex integrations, automations, APIs, ERPs, logistics platforms and custom software. Degree in Systems Analysis and Development (2025), learned mostly in production on real projects. Most work lives in proprietary private environments, with real systems available for technical walkthroughs in interviews. Results-oriented, interested in challenging work, technical growth, architecture and leadership.

Experience

Systems Developer — Software houses (contractor — ongoing)

2021 — Present

Corporate web systems for three branches of the same group. Full cycle: requirements, architecture, development, integrations, maintenance and evolution.

- ERP, WMS and logistics management systems with high data volume and simultaneous integrations.
- SaaS integration hub for ecommerce, marketplaces and payment gateways — 20+ companies, evolving and scalable.
- Building and consuming APIs (JSON, SOAP, XML, REST) and integrating internal and external systems.
- Custom operational checklists for logistics, supporting process rollout.
- Risk management, fleet tracking and insurance platforms.
- SaaS combining public and private data sources — 180+ client companies, scalable.
- Condo management and on-demand corporate software.

IT Technician and Consultant — CLT employment

2014 — 2021

Infrastructure and support for mid-size companies: from the bench to the server room.

- Desktop and notebook maintenance.
- Corporate networks and structured cabling.
- Server and network setup.
- Technical support and IT consulting for mid-size companies.
- Rolling out technology solutions in corporate environments.

Education

Systems Analysis and Development — Faculdade Descomplica (distance learning) (2025)

Licentiate in Languages and Literature — UniFeob – São João da Boa Vista (2016)

Skills

Backend: PHP · Laravel · APIs REST · Integrações JSON, XML, SOAP

Databases: MySQL · MongoDB

Frontend: HTML, CSS, JavaScript · jQuery · Bootstrap

Mobile: Flutter

Infrastructure: Redis · Jobs / Supervisor / Horizon · MQTT

Soft skills: Systemic view of business and technology · Technical and strategic work · Fast learning in new domains · Critical systems and complex integrations

Projects

ERP, WMS and logistics operations

Systems used by logistics operations with high data volume and concurrent integrations.

Laravel · MySQL · Jobs · Integrações

SaaS hub for marketplaces and payments

Advanced ecommerce, marketplace and payment-gateway integrations — 20+ companies on the hub.

SaaS · APIs · JSON · Pagamentos

Public and private data SaaS

Data-source consumption for a SaaS with 180+ client companies.

SaaS · APIs · Redis · MySQL

Risk, fleet and insurance

Risk management, fleet tracking and insurance operations platforms.

Laravel · MQTT · Integrações

Operational checklists

Custom logistics checklists supporting process rollout.

Laravel · Processos

Condo and on-demand software

Condo management and made-to-measure corporate systems.

Laravel · Sob demanda
